MacBook Air

The CradlePoint Personal Hotspot enables you to access the capabilities of the Sprint Mobile Broadband Network with any WI-FI enabled device including your iPhone and iPod Touch.

Unlike traditional wireless routers, the Sprint Personal Hotspot has an internal battery. This enables 1.5 to 3 hours of truly untethered connectivity to the Sprint Mobile Broadband Network via a Sprint Mobile Broadband USB modem, such as the Sierra Wireless Compass.

Sprint's Mobile Broadband Network reaches more square miles, more cities, and more airports than any other mobile broadband network, so you can get the information you are looking for NOW!
